

K100

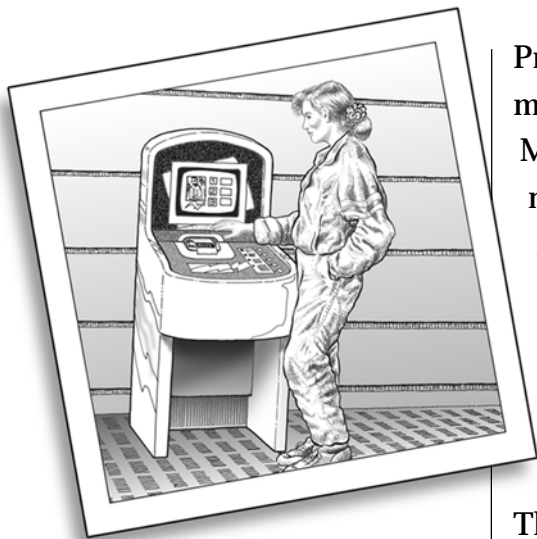

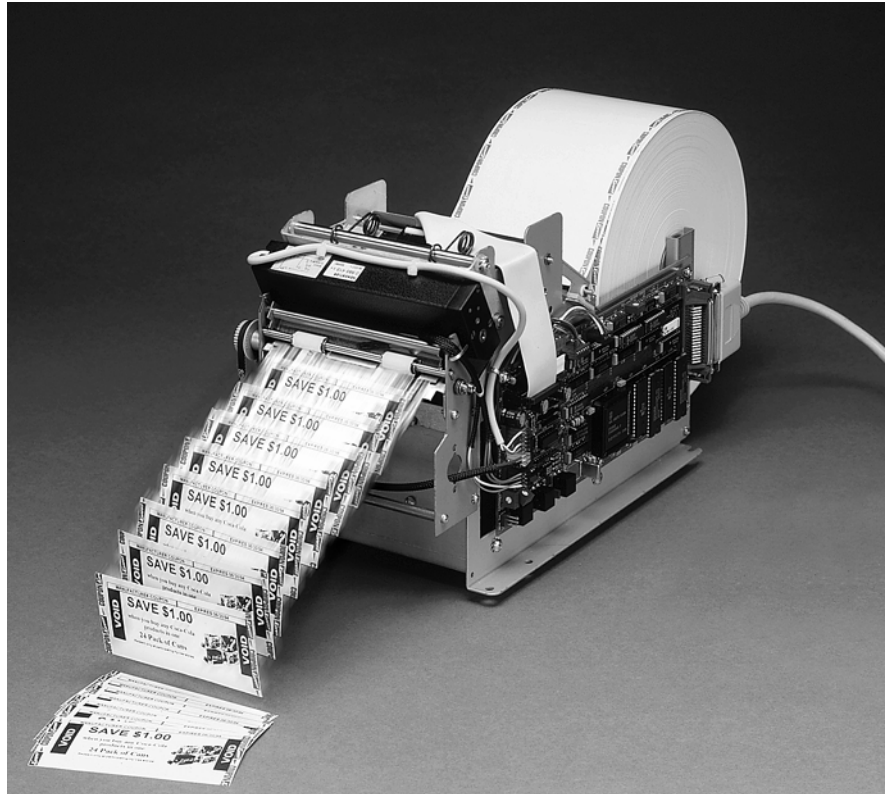

Thermal Line Printer

FOR KIOSK APPLICATIONS

The K100 Printer is designed for use in publicly operated kiosks in relatively unsupervised environments.

The modular design of the K100 permits the OEM to configure the printer to the needs of the specific market being served.

- Printer with Controller
- Cutter
- Presenter with Paper Sensor
- Power Supply
- Windows Driver Included

Printrex has many years of experience producing high performance thermal printers/plotters for Original Equipment Manufacturers. These OEMs integrate the printers into instruments and systems for a wide range of medical, scientific and industrial products. Printrex works closely with their OEM partners to be sure the printer characteristics match the needs of the most demanding environments. The features compatibility and rugged reliability of Printrex products are the reasons they are installed in railroad locomotives, jet aircraft and used around the world for oil field data logging. This close working relationship with the OEMs has been followed during the development of the K100 to ensure that the features and characteristics are the appropriate match for kiosk applications.
